

March 20, 2008

Please read the following important message from our school nurse, Mrs. Kochanek.

This is to inform you that one student has been diagnosed with Pertussis, commonly known as Whooping Cough. Although most school children have been routinely immunized to prevent this disease (the DPT shot), an occasional case may occur.

If your child has had or develops a cough, we recommend that you indicate to your physician that he/she may have been exposed to Pertussis. This is particularly important if you have children less than one year of age at home with your school age child.

Please feel free to contact the school nurse, Janice Kochanek at 201-848-5710
