

THE DANGER OF DRUGS ON CD

This portion of the project is designed to share information about your designated drug using your creative ideas. Each group of students will be required to sing the song that they created – all members of the group must participate!

The criteria for this activity are as follows:

- Each group must create a song title that relates to their drug. You will be expected to explain the significance of your song name at the start of your performance.
- Compose a song consisting of a minimum of **20 original lines** (repeats and refrains don't count)
- You must include a **minimum of 10 facts** that you discovered in your research in the lines of the song
- Music selection: Nursery Rhymes. Your group will choose a song from a list of choices.
- All members of your group must participate in the performance. You have several choices for the setup of your performance:
 - You may have a lead singer with back-up singers
 - A group of singers that share parts or sing solo at different times
- All songs must be submitted for review prior to your performance. Please be sure that your lyrics are appropriate and factual. A final copy of the song (typed) will be required on the day of the performance.
- This aspect of the project should be fun, factual and entertaining.
Good Luck☺
