

Saving Images for the Web Using **Save for Web...**

1. Open the image you would like to put on a web page.
2. The image and file size should have already been set.
3. Go to the File menu and select Save for Web....

4. You will get the dialog box that appears on the right with your image.

5. Look at

the area designated by the top arrow.

6. This is the place that you will use to set the type of file, JPEG for pictures, GIF for graphics.
7. Just below that you can set the image quality. The higher the quality the better the image will look and the larger the file size will be. Experiment!
8. The two arrows at the bottom of the diagram show the original and new file size.
9. When all of the adjustments have been made click OK and save your image.

Remember to save it in the right folder.
